

PROJECT TITLE :- TRAVEL AND TOURISM MANAGEMENT

CATEGORY:WEB APPLICATION

Purpose of :-Purpose is to develop a system that automates the processes and activities of a travel and tourism agency.

Scope : One can perform all operation related to travelling and sightseeing.

INTRODUCTION :

Existing system : In the present system a customer has to approach various agencies to find details of places and to book tickets .which required lots of time and efforts often not getting all required information all the time and many time the customer also get wrong information so it is very difficult for customer to plan a particular journey and execute it properly

Proposed system : The proposed system is web based application so it allow individual to access all the information related to that place and relevant information Tourist can decide about the places they want to visit and make booking online for travel and accomodation without any cancelation charges and maintain by team so regular updation of all related information related to that places;

ADVANTAGES : FOR TOURIST :

Time and cost savings : Time saved while required for travelling to agencies and various agents and cost of trip which are not known to us in fast .

Making journey of customer to be executed properly which was planned by them . Allow customer to decide the places where they want to visit and get all relevant informations in past.

ADVANTAGES FOR DEVELOPERS :It provide self employment and give flexible working of without any schedule working

It saves money and time for those individual who tried to initiate their business and deliver excellent result in less time with less efforts

SOFTWARES TOOLS : Microsoft mysql server.

PROGRAMMING LANGUAGES : Php , html , javascript .

DEPLOYMENT : Operating server system ,window and linux.
